

Executive Summary: Scottyab/Rootbeer Project

Date: 01/29/2025

Prepared by: Adam Hamou

Overview:

Rootbeer project is an open-source android library, designed to detect if an android device has an elevated system privileges that could potentially compromise security

Key Highlights:

15+ active contributors and a total of 30 contributors

Overview on a timeline:

Conclusion:

The Scottyab/Rootbeer project remains an important security initiative with active contributions, unfortunately, with the recent decline from our key developers presents a risk to the overall project. Addressing the general decline and maintaining the momentum will be essential in sustaining our project success.
